Angular 2 date format.

We use the datapipe as follows with interpolation. Gotcha: out of the box, only IT-US is supported. The datapipe refers to the municipamodulus. DatePipe is a pipe API that works using the tube operator (|). s represents seconds. {{Strdate | Date: 'hh:mm, is}} will give out 09:44, Monday for the datapipe demo, we will perform a complete example. 'Short' which is equivalent to "YMDJM". 2. Import {CustomDatePipe} from './custom.datePipe'; @NgModule({statements: [CustomDatePipe]}); Now we can use our personalized dates tube in the component file as shown below {{Todaydate | CUSTOMDATE}} Result: Thursday 20 June 2019 4:15 AM In addition to the time formats above, we can define our formats from custom data using the following symbols. Example {{Today | Date: 'gggg'}} View the time era A e a -> a "nno domini" - we can combine these symbols to view our date formats as shown below. {{Today | Date: 'eeee d mmmm y gggg'}} // Tuesday 18 June 2019 year Domains NameFormat format specifreg.
